Applicants Request for Continued Examination (RCE) filed May 7, 2007 is acknowledged and accepted. Claim 54 is presently canceled. Claims 41 and 44-51 remain under consideration.

Applicants' arguments have been fully considered. Rejections and/or objections not reiterated from previous Office Actions are hereby withdrawn.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 41 and 44-51 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement, and, as containing subject matter that was not described in the specification in such a way as to enable one skilled in the art to practice the invention. The claims contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor, at the time the application was filed, had possession of the claimed invention.

Claims 41 recites "a method of treating an individual suffering from fibromyalgia."

There is insufficient written description for this claim limitation in the disclosure.

M.P.E.P. § 2163 states, "An applicant shows possession of the claimed invention by describing the claimed invention with all of its limitations using such descriptive means as words, structures, figures, diagrams, and formulas that fully set forth the claimed invention...one must define a compound by 'whatever characteristics sufficiently distinguish it'. A lack of adequate written description issue also arises if the knowledge and level of skill in the art would not permit one skilled in the art to immediately envisage the product claimed from the disclosed process."

Applicants have failed to provide guidance as to the critical parameters (dosages, dosing regimens, etc.) of the claimed methods of treating an individual

suffering from fibromyalgia. There are no working examples directed to a method of treating fibromyalgia. There is no clear nexus from the biochemical properties of racemic reboxetine to the clinical effect of treating fibromyalgia.

*Genetech Inc vs. Nova Nordisk* states, “[A] patent is not a hunting license. It is not a reward for a search but a compensation for its successful conclusion and ‘patent protection’ is granted in return for an enabling disclosure of an invention, not for vague intimations of general ideas that may or may not be workable.” (42 USPQ 2d 1001, Fed. Circuit 1997).

Accordingly, it is not clear Applicants were in possession of the full scope of the claimed methods at the time the invention was made. Adequate description requires more than a mere statement that reboxetine acts selectively on the reuptake of noradrenaline in contrast to fluoxetine that is a serotonergic drug. The skilled artisan could not “immediately envisage” the claimed methods based on the description provided in the disclosure.

No claim is allowed.

Guber et al., Psychiatric Clinics of North America (abstract), is cited to show the state of the art in that psychotropic drug treatment was known in the prior art for treating fibromyalgia.
